# BRONZE EYE BOLTS

---

Bronze eye bolts are essential components in the construction of transformers. They are used to secure the heavy transformer casing to its base and prevent it from moving or shifting during operation. The use of bronze material for these bolts offers several advantages over other materials, making them a popular choice among transformer manufacturers.

Conex uses high quality Shell casting/Shell moulding for casting Aluminum [Bronze Eye bolts](#) 3/8" Size in various designs for transformer bushing assemblies. We use material CDA 955 and CDA 956 Aluminium Bronze Alloys for making this product. The Threads of Bronze eye bolts can be roll threaded or cut threaded as per needs.

### Features:

- High strength and durability: [Bronze eye bolts](#) are made from high-quality bronze alloy, which is known for its strength and resistance to corrosion. This makes them ideal for use in harsh industrial environments where transformers are typically located.
- Non-magnetic: Bronze is a non-magnetic material, making it suitable for use in transformers. This is important as the presence of magnetic materials can cause interference with the operation of the transformer.
- Resistant to corrosion: The bronze material used in these eye bolts is resistant to corrosion, making them ideal for use in coastal or marine environments where exposure to salt and moisture can cause corrosion in other materials.
- Easy to install: Bronze eye bolts are designed to be easy to install, allowing for quick and efficient assembly of transformers.

Threads: 3/8" UNC, 1/2" UNC, M10 , M12

Length: up to 3"
